Nowadays, it is essential to find transition from learning facts to acquiring real life skills which will prepare young people for life and motivate to study.

The schools involved in the project have different experience in developing young people entrepreneurial skills and in approaches to career education.

The schools work together on a cooperation model: school – municipality council – entrepreneurs. An important aspect – students while participating in project activities investigate entrepreneurship environment and job market.

The project intends to involve all subject teachers, not only economics and social science teachers, as entrepreneurial skills are developed in various situations and every teacher can contribute.

The main result – informal study tool – learning platform on Moodle with a certification possibility “Young people, Entrepreneurship skill development possibilities”.
